Anushka Ughade

Software Engineer — Full-Stack, Automation & AI

Pune, India | anushkaughade11@gmail.com | +91 72198 47212 | linkedin.com/in/anushkaughade | anushka.dev

SUMMARY

Software engineer designing and operating production systems across full-stack development, automation and AI. Four years shipping for real clients: ticketing, AI media pipelines, CRMs and multi-store ordering platforms, often as the only engineer on the project.

EXPERIENCE

Senior Full-Stack Developer, *Being Addictive, Pune* May 2024 – Present

- Built and maintain a high-traffic ticket booking system: 15,000+ tickets sold over a single 5-day live event, with server-side booking logic and automatic retry recovery for payment/generation failures; re-platformed in 2026 into containerised services on AWS (EKS, RDS, SQS).
- Built an internal AI media orchestration platform unifying six generation models behind one interface for internal company use; cut per-asset turnaround by roughly half across 1,000+ assets and 50+ client projects.
- Designed and built an internal Employee Management CRM with role-based access for all employees, replacing spreadsheet-based HR tracking.
- Inherited and completely revamped Goldenoak and Unicorn, two regional ordering and inventory platforms for 100+ Rolls Mania stores across India, integrated with LimeTray; fixed a critical inventory bug, rebuilt the frontend, and containerised both onto Kubernetes (Amazon EKS) from one shared image.
- Delivered 7 additional client CRM systems solo, spanning e-commerce inventory and billing, lead generation, and customer records.
- Developed and maintain 20+ business and client websites across technology, education, real estate and hospitality sectors.

Web Developer, *Arphics, Pune* Jul 2022 – Feb 2024

- Built an online admissions system with backend validation and automated PDF generation.
- Delivered responsive business and school websites using HTML, CSS, JavaScript and PHP.
- Collaborated with multimedia and creative teams to integrate rich visual assets into clean frontend code; optimised page-load times and resolved complex technical bugs.

SELECTED PROJECTS

TicketAdda — Event ticketing platform; 15,000+ tickets in a single 5-day live event. Rebuilt in 2026 as containerised services on Amazon EKS (booking, payment integration, ticket issuance) with an SQS-backed retry worker that recovers failed ticket generation without blocking bookings; idempotent transitions prevent duplicate tickets. *React, Node.js, Docker, Kubernetes, RDS, SQS, S3.*

AI Media Orchestration Platform — One dashboard over six generation models (Kling, Veo 3, Nano Banana 2, ElevenLabs, Lyria, Imagen), with a FIFO queue that keeps requests under provider rate limits and automatic retries. About 50% faster per-asset turnaround across 1,000+ assets. *Next.js, Node.js, Python.*

Rolls Mania Ordering & Inventory (Goldenoak, Unicorn) — Rebuilt the data and identifier logic, LimeTray integration and frontend of two inherited platforms serving 100+ stores; then containerised both: one versioned image, two isolated deployments on Amazon EKS, with a staged cutover and tested rollback. *PHP, MySQL, Docker, Kubernetes, AWS.*

Client systems — BOPS employee management CRM (attendance, payroll, leave, allocation, reviews) and CRMs for Reel Factory, Sunanda Mangal Kendra, Helios, Realtors India, Jaywant Group, MB Ashtekar Jewellers and Pera CET. 19 client sites currently live at anushka.dev.

SKILLS

Frontend	HTML, CSS, JavaScript, React, Bootstrap
Backend & Data	Node.js, Express.js, PHP, Next.js, Python, REST APIs, MongoDB, MySQL
Cloud & Infra	AWS, Docker, Kubernetes (Amazon EKS), Microservices, Amazon ECR, RDS, SQS, S3
AI & Automation	Direct model API integration, n8n, cron-based processing
Tools	Git, Linux, CI/CD pipelines, role-based auth design

EDUCATION

B.E., Electronics and Telecommunication, *AISSMS IOIT, Pune* — CGPA 8.22 May 2022

Certificate Development Program, MERN Stack Oct 2021 – May 2022
